

To: Federal Communications Commission, Room 222
1919 M Street
Washington, DC 20554

2/17/93

Dear Commissioner,

This is in regard to docket FCC 93-1.

Are the Congressmen, who voted for the Communications Security Act, stupid... or are they being paid to believe the line about radio telephone users, and people who live in glass houses, having a right to privacy?

If the Cellular Telephone Industry wants to secure its services, why don't they provide encryption? But as you should already know, they ARE ALREADY moving to develop digital scrambling at this time. What will anyone gain by making rules that will be unneeded by the time they take effect? If there could be much effect at all, because anyone with something as simple as a portable black and white TV can easily receive 800 MHz.

Why is the US Congress, after all these years, moving to put reception restrictions on bands that will soon be digital noise?

Why should equipment manufacturers and consumers have to pay extra to have equipment avoid receiving certain frequencies? Does Congress think that everyone is as stupid as they are?... That only Corporations can think of how to build or modify equipment to receive anything.

The FCC was set up, to fairly allocate radio frequencies and establish transmission standards to provide for the maximum benefit for the most number of citizens... NOT to control reception.

Any attempt to regulate free reception should be as abhorrent to any person, except tyrants, as any attempt to repress free speech.

Sincerely, *Daniel Saturn*
